Ashish kumar

Senior Software Engineer with strong experience in designing and building scalable, production-grade systems across frontend, backend, and cloud environments. Expertise in microservices architecture, event-driven systems, and AI integrations.

📍 Uttarakhand, India – 248197

EXPERIENCE

Gadget Software | *Senior Software Engineer*

FEB 2023 - PRESENT (3 yrs, 3 months)

Led **cross-team development**, contributing to system architecture, design discussions, and implementation of scalable products.

Played a key role in **technical decision-making and architecture design** across multiple high-impact systems.

Delivered **production-grade platforms** leveraging AI, cloud infrastructure, and distributed system design.

Collaborated across teams to ensure **efficient execution, scalability, and system reliability**.

Freelance Software Engineer

JAN 2021 - JAN 2023 (2 yrs)

Delivered **end-to-end system design, planning, and implementation** for complex applications.

Worked with **US-based healthcare clients and Indian e-commerce businesses**.

Built **scalable microservices architectures and AI-integrated systems**.

Specialized in **high-performance, production-grade applications** with strong architectural foundations.

EDUCATION

Master of Computer Applications (MCA)

APR 2020 - APR 2018

Uttaranchal University, Dehradun 248197.

TECHNICAL SKILLS

Frontend: Next.js, React.js

Backend: Node.js, Express.js, Fastify, FastAPI

Languages: JavaScript, TypeScript, Python

Databases: MongoDB, PostgreSQL

Web: HTML, CSS

Cloud & Tools: AWS, Azure, Google, CMS

Advanced: AI Integrations, Distributed Systems, Event-Driven Architecture

CORE EXPERTISE

Web & App development

Frontend Engineering

Backend Engineering

Event-Driven Systems

PERSONAL DETAILS

Gender: Male
DOB: 20-06-1997
Marital status: Single

PROJECTS

EMR System — *US Client – Oncologist Surgeon*

- Built the **entire frontend application from scratch**, delivering a responsive and intuitive UI tailored for clinical workflows.
- Developed a **full-stack EMR platform** supporting patient onboarding, scheduling, encounters, and procedures.
- Architected **microservices-based backend** for file management, encounter tracking, and role management.
- Implemented **multi-clinic support** and **RBAC (role-based access control)**.
- Built **AI-powered pipelines** for patient data sanitization and document processing.
- Developed **audio/video AI processing systems**.
- Ensured **HIPAA-compliant architecture** for secure healthcare data handling.

EasyBiznus — *INDIAN Client – Businessman, CA*

🔗 https://easybiznus.com/

- Built and scaled the **backend system from scratch** for a B2B marketplace enabling vendor–buyer transactions.
- Designed **scalable database schema** supporting users, inventory, bulk orders, and transactional workflows.
- Implemented **geo-location–based search and filtering**, improving supplier discovery based on proximity.
- Integrated **payment gateway** and logistics via Shiprocket with real-time tracking.
- Developed **GPS-based tracking features** for enhanced shipment visibility.
- Built **wallet and credit system** to support B2B credit-based transactions.
- Implemented **bulk ordering (carton-based system)** for large-scale purchasing workflows.

Client App — *Cross-Platform Digital Manuals Platform*

- Spearheaded development of a **cross-platform Progressive Web Application (PWA)** for managing digital manuals across **10+ enterprise clients**, supporting Windows, macOS, iOS, and Android.
- Delivered the **entire product end-to-end as a solo engineer**, including system architecture, technology selection, and full implementation.
- Designed **client-specific theming and customization**, aligning UI/UX with individual brand identities.
- Implemented **feature-rich functionality**, including FCM notifications, favorites, browsing history, offline mode, embedded media, and interactive UI components.
- Developed **secure authentication system** with social logins (Google, Facebook, Microsoft) and standard auth flows.
- Built **advanced search and filtering capabilities**, improving content discoverability across large datasets.
- Integrated **real-time analytics pipeline**, capturing user interactions periodically via background processing without impacting performance.

Insights Dashboard — *Data Platform & User Management System*

- Led development of a **data analytics and user management platform**, spanning both frontend and backend systems.
- Designed and implemented a **multi-tenant user management system**, supporting, hierarchical access.
- Built **role-based access control (RBAC)** to enforce secure and granular permissions across the platform.
- Developed **data refinement pipelines**, enabling users to filter and customize access to large-scale datasets.
- Implemented **subscription and payment management system**, controlling access to premium features and data.
- Created **dynamic dashboards** for personalized insights and analytics visualization.

Policy District — Automated Data & AI Platform

🔗 https://www.policydistrict.com/

- Architected and developed a **fully automated data ingestion and processing system** for government documents (rules, proposed rules, presidential documents).
- Built **event-driven backend pipelines using AWS Lambda**, enabling daily ingestion, processing, and storage of large-scale document data.
- Integrated **AI-based processing** to refine and transform raw documents into structured, user-friendly insights.
- Led both **frontend and backend development**, defining overall system architecture and implementing critical components.
- Delivered a **scalable, production-grade system** capable of handling continuous high-volume data ingestion and transformation.

AI Chatbots — AI Chatbots & Cloud Platforms

- Designed and built **end-to-end AI chatbot solutions** for multiple clients using AWS, Azure, and Google Cloud.
- Leveraged **AWS Bedrock, Azure AI Foundry, and Google Cloud AI** for model training and deployment.
- Developed **custom data pipelines and knowledge structures** to optimize chatbot accuracy.
- Managed full lifecycle: **data preparation → model integration → deployment → scaling**.
- Gained strong expertise in **cloud architecture and distributed AI systems**.

Customer Management System — Microservices Architecture

- Designed and implemented a **scalable backend system using microservices architecture (Python-based)**.
- Built **API Gateway layer** for authentication, authorization, and secure API exposure.
- Developed **complex hierarchical RBAC system**, supporting platform admins, client admins, and end-users with multi-level role assignments.
- Enabled **granular permission control**, allowing users to have multiple roles across different levels and contexts.
- Built **customer onboarding and account management systems**, supporting multi-tenant client structures..

Event-Driven Microservices — Event-Driven Data Processing & AI Pipeline

- Architected and developed a **high-scale event-driven data processing pipeline** for refining large volumes of unstructured data.
- Designed system to handle **multi-format inputs** (PDF, text, images, videos, spreadsheets) and process them efficiently.
- Built **data chunking and splitting services**, enabling parallel processing of large datasets.
- Implemented **distributed AI processing engine**, supporting multiple models and providers dynamically.
- Developed **event tracking and orchestration system**, ensuring consistency and order across asynchronous workflows.
- Created pipelines for **data refinement, transformation, and insight generation**, tailored to client-specific configurations.
- Delivered a **production-grade system** capable of processing thousands of pages and large datasets at scale.
